

Kay's Food Delivery App

Siddharth Kudgunti

Project overview

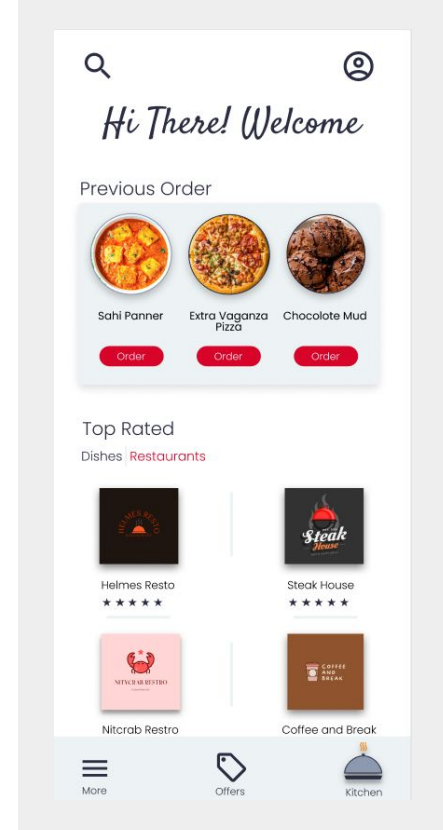

The product:

Kay's Food Delivery app is one common platform for all the restaurants in the town. The target audience are the one who don't have time to go and pick their meals due to the tight schedule. Our app will help the user order a meal and can get it delivered at their doorstep or can pick the order from the restaurant so that they can manage their time accordingly

Project duration:

January 2022 to March 2022

Project overview

The problem:

Busy workers and commuters lack the necessary time to prepare their meals

The goal:

Design an app that can delivery the food at doorsteps and provide notification and status of the orders.

Project overview

My role:

UX Designer from conception to delivery.

Responsibilities:

Conducting interviews, paper and digital wireframing, low and high-fidelity prototyping, conducting usability studies, accounting for accessibility, and iterating on designs.

Understanding the user

- User research
- Personas
- Problem statements
- User journey maps

User research: summary

I've conducted a survey and created an empathy map to understand users so that I can design the product. The most common users are adults who are working professionals.

The most important factor which I came to know after my research is that minor details also matters a lot. Like having proper info on the dishes helps user decide the dishes or just having a simple UI without overwhelming information on the home page can help user search their desired food and order it.

User research: pain points

1

Time

Time is really an important factor for the people who work in shift and tight schedule

2

Simple UI

Too much of informations on the homepage makes few users confused and cluster

3

Images

Not providing proper images and details of the dishes makes user not to try different dishes

4

Improper Assistance

User needs to know where their order is or needs to know if its getting delayed.

Persona: Riya

Problem statement:

Riya is a Doctor who needs an app that can deliver the food on time because her schedule is often tight and have less time to sit and have dinner with her parents or during her break

Riya

Age: 34

Education: PG in Cardiology

Hometown: New Delhi, India

Family: Lives with Parents

Occupation: Doctor

“Since my work timing is uncertain due to shifts, I dont have time to go out and pick my dinner”

Goals

- I want to be best of myself, so that I can help people.
- To make sure I eat properly on time
- To have dinner with my parents once in a while

Frustrations

- “I dont get time sit and have dinner with my parents, since I’ll be having limited time”
- “I would get annoyed when the order gets delayed and is not being informed”
- “Its really overwhelming when there are lots of options while ordering and not proper usage of images”
- “Not proper informations on dishes or proper rating which makes me sad not to try new dishes”

Riya is a PG Doctor in Cardiology. Since she is cardiologist she often spend more time in hospitals treating patients due to high spikes of heart attack in current situation. Which make her miss her dinner or lunch sometimes. She also wants to have dinner with her parents once in a while. Riya wants something simple and sober food delivery app (As she is claustrophobic) which can deliver her food on time and inform her if there is delay in delivering her order so that she can adjust her busy schedule accordingly and also make sure the order is delivered to her place before she reaches her home so that she can have a good meal with her parents.

User journey map

Mapping Riya's journey helped me to understand the pain points

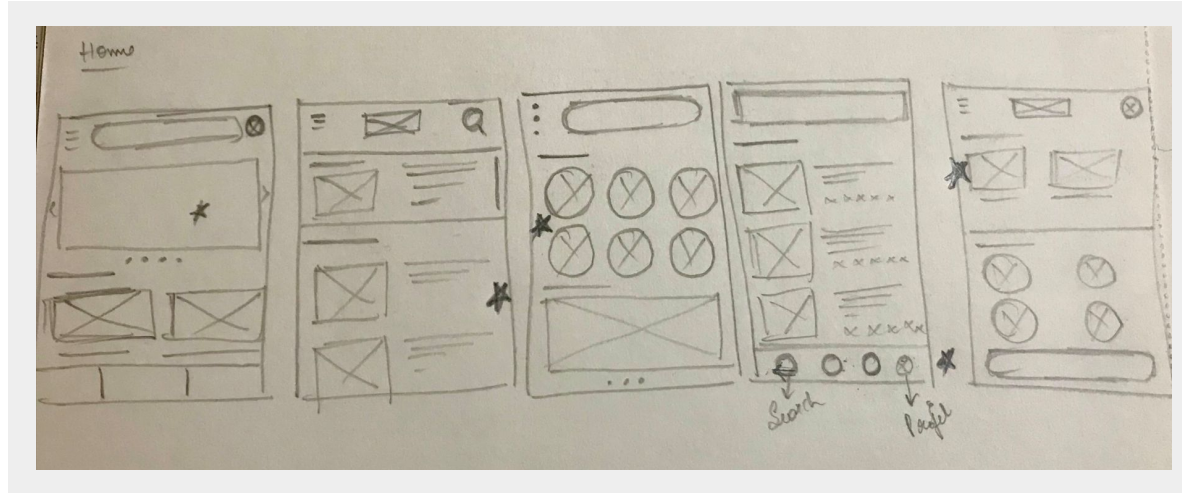

Persona: Riya

Goal: Have a simple and sober food delivery app which can update me of the orders due to any situation

ACTION	Search for Food	Choose a Dish	Pay the Bill	Wait for the Order	Collect the Order
TASK LIST	<p>Tasks</p> <p>A. search for food in search bar B. scroll to select desired dish C. avoid irrelevant information</p>	<p>Tasks</p> <p>A. Look for the ratings B. Look for the dish images C. Then choose a dish</p>	<p>Tasks</p> <p>A. Scroll to see the Payment option B. Enter the card details C. Complete the payment</p>	<p>Tasks</p> <p>A. Contact the restaurant for the order status B. Check where the order is reached</p>	<p>Tasks</p> <p>A. Go to the pick up point B. Check the order C. Come back to the place D. Have dinner</p>
FEELING ADJECTIVE	<p>Excited to order a food due to hunger</p> <p>Overwhelmed due to lots of options</p> <p>Frustrated due to too much of information on home page</p>	<p>Annoyed since the images are not clear</p> <p>Disappointed due to lack of informations on the dish like ratings etc</p> <p>Glad to finally choose the dish</p>	<p>Frustrated to find the payment option on the payment page</p> <p>Too lazy to add the card details</p> <p>Happy to complete the payment</p>	<p>Irritated to call the restaurant again and again for the status</p> <p>Frustrated to see that there is no way she can know the reason for the delay</p>	<p>Tired to go to the pick up point</p> <p>Finally excited to have meal after so much of waiting</p>
IMPROVEMENT OPPORTUNITIES	<p>Provide a suggestions while searching in the search bar</p> <p>Add voice control search in search bar to ease the process</p> <p>Give an option or suggestion to order the last ordered items</p> <p>Provide a dedicated area where additional informations are present, this helps the people who are claustrophobic</p>	<p>Use high resolution images for better quality</p> <p>Give an option for the user to see the additional details about the restaurant or rating (like a button)</p> <p>Assertive voice control options</p> <p>Translator for different lingual users</p>	<p>Keep payment option at the top as of the page as well, for the users who would directly want order without going through the details</p> <p>Give an options to save the card details so that they can choose it in their next order directly and do the payment</p>	<p>Provide a dedicated page to show the order status</p> <p>Add a feature that informs user through text or notification whenever there is delay in delivering the order</p> <p>Provide a button for the customer care details at the top of the page</p>	<p>Give a text area where user can add additional informations like where to deliver the order. This helps user who are busy or cant walk to the pick up point so that order can be delivered wherever the user is seated</p>

Paper wireframes

Taking time to iterate for each screen helped to find new ideas which can be used in the wireframe and also helped me to address the pain points. E.g. for the home page I've added the list of previous orders to make it quick and time saving.

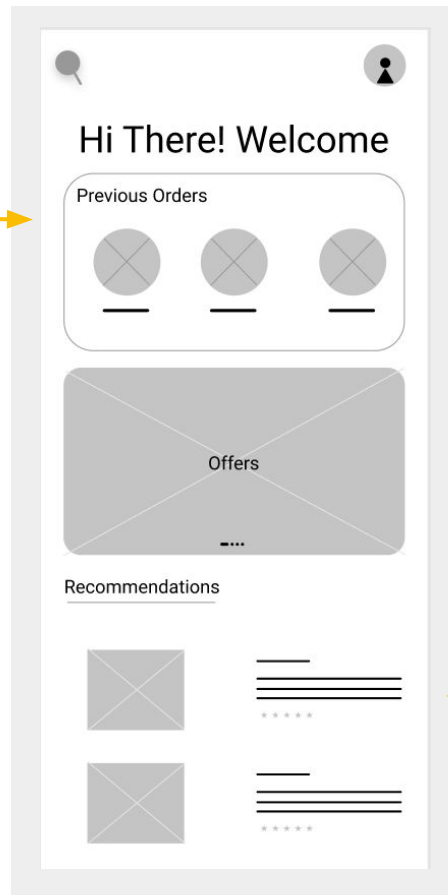

Stars were used to mark the elements of each sketch that would be used in the initial digital wireframes.

Digital wireframes

For the initial phase of the design I made use that I've addressed the problem that is time constraint

Just by clicking on any of the previous orders it will navigate to the order page

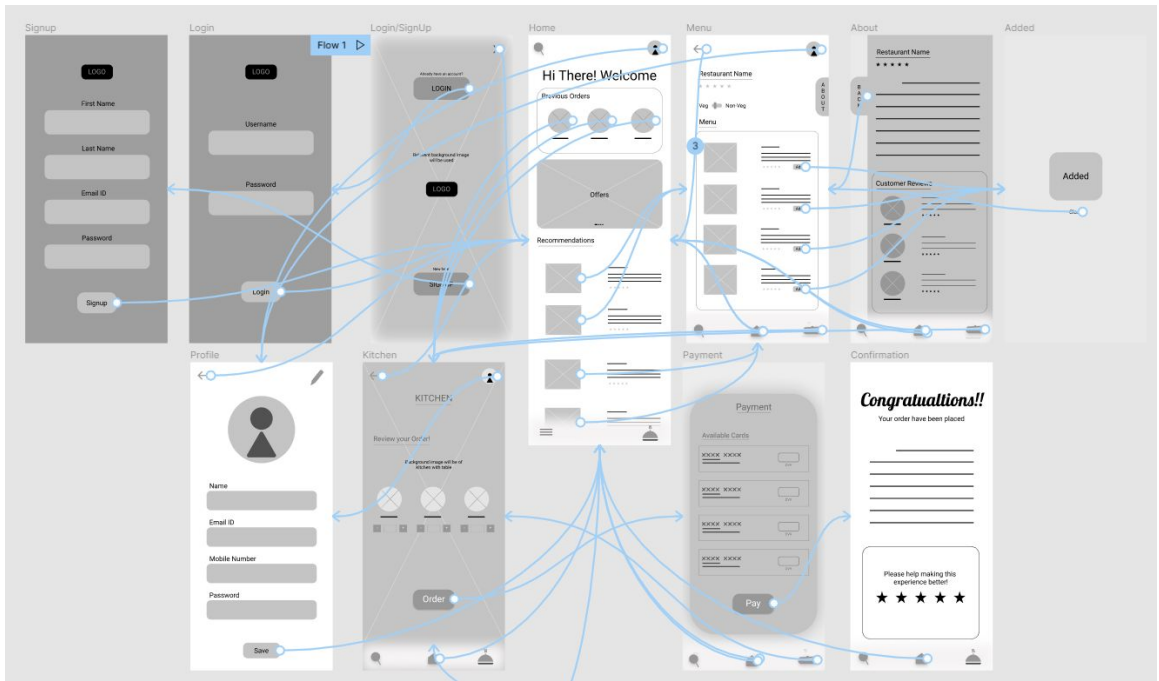

This section will help the users who would like to try out new different things

Low-fidelity prototype

Using the completed set of digital wireframes, I created a low-fidelity prototype. The primary user flow I connected was ordering their previous orders and add items from the menu and complete the order process

View Kay's Food Delivery App

[Low Fidelity Prototype](#)

Usability study: findings

Write a short introduction to the usability studies you conducted and your findings.

Round 1 findings

- 1 User wants to order quickly
- 2 User wants notification of status of the order and time for the delivery

Round 2 findings

- 1 Pop-up for the added item should make it catchy
- 2 Single use of colour for all the headers
- 3 Change the colour of theme based on the type of food selection (if possible)

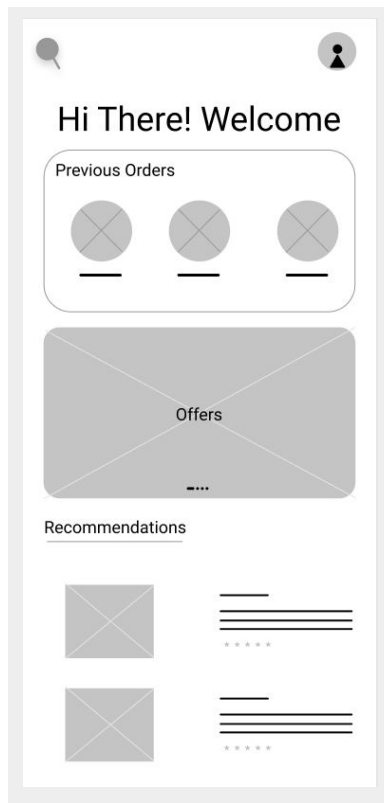

Refining the design

- Mockups
- High-fidelity prototype
- Accessibility

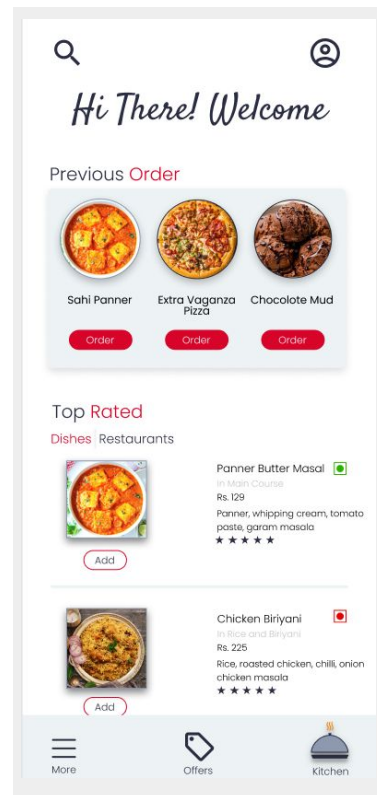

Mockups

Early design there was a dedicated space for the **Offers** and unders **Recommendations** there was no separation between dishes and restaurants. After the usability study, there is **dedicated page for Offers** and user can **toggle between Dishes and Restaurants** under **Top rated section**

Before usability study

After usability study

Mockups

The second usability study helped me to recognise that user's were getting confused of the

confused of the

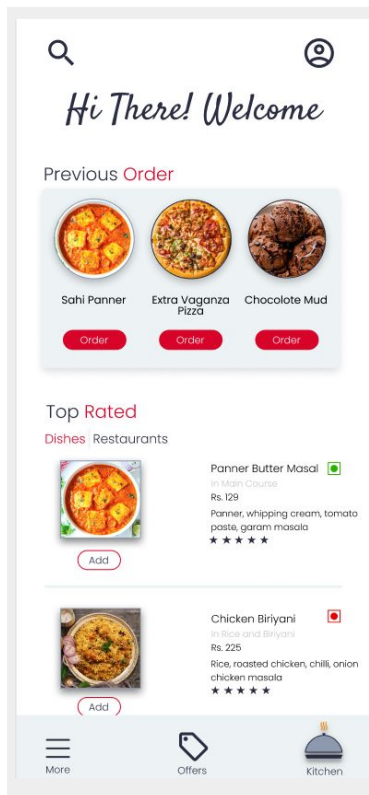

highlighted parts of the header as an actionable element. Hence to avoid

that I had to make the

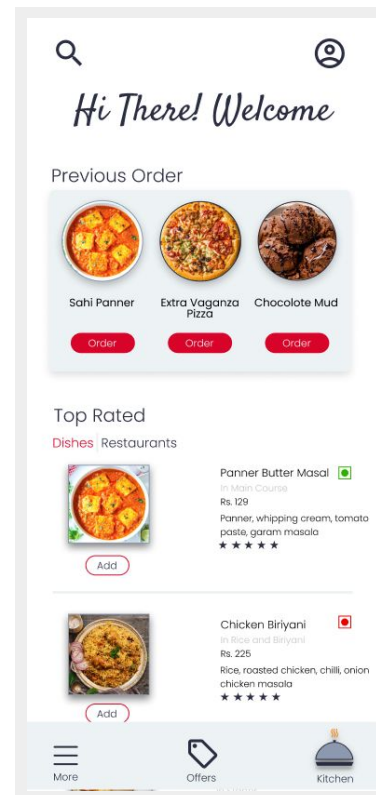

colour of the header

monochrome.

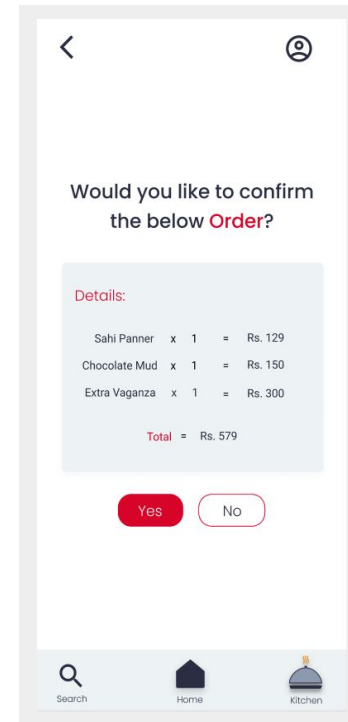

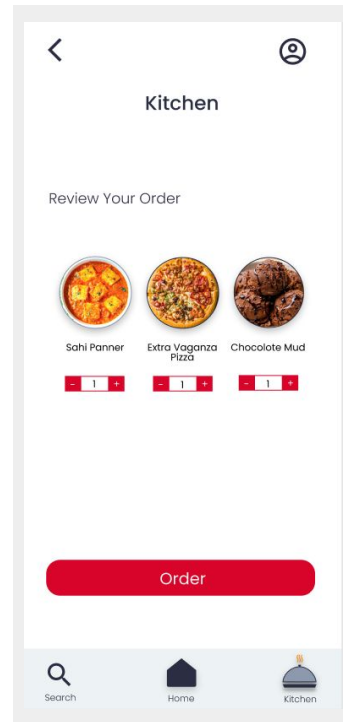

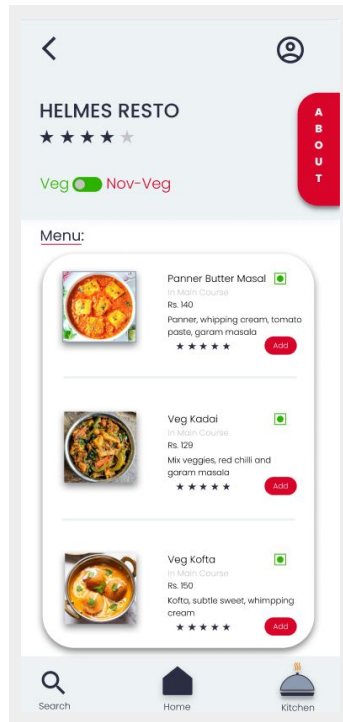

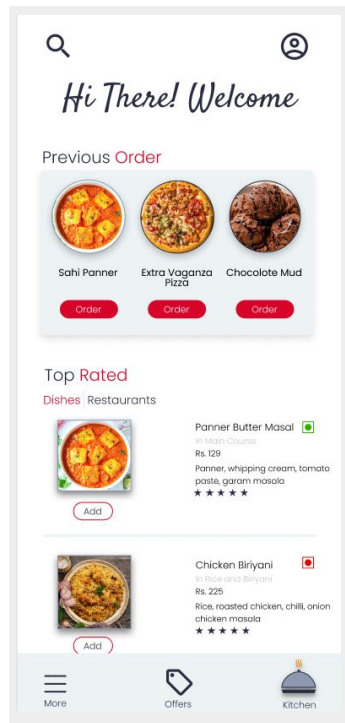

Before usability study 2

After usability study 2

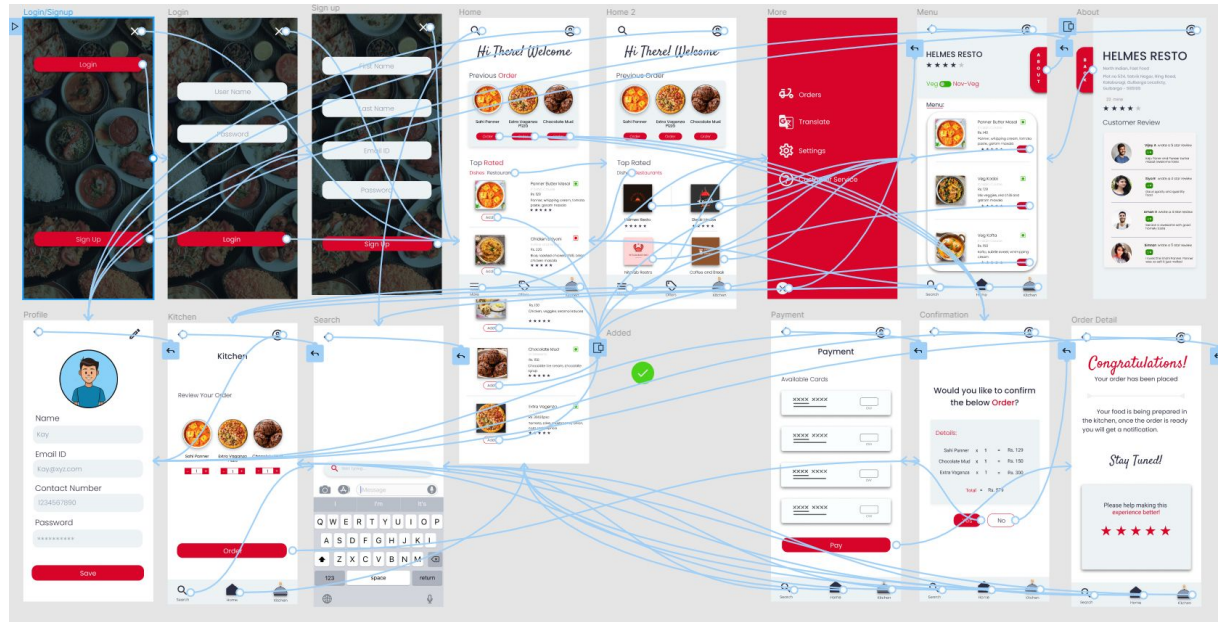

Mockups

High-fidelity prototype

Link for the Hi-Fi prototype: [Kay's Kitchen](#)

Accessibility considerations

1

Provide a language translation feature for the people who doesn't understand English

2

Used icons to help make navigation easier.

3

Used detailed imagery for dishes and provide ratings to help all users to try new dishes

Going forward

- Takeaways
- Next steps

Takeaways

Impact:

The Kay's Food Delivery App definitely help user to order their meals quickly

What I learned:

The most important thing I've learned is that whatever we plan initially will not be the same outcome. Usability studies and peer feedback influenced each iteration of the app's designs.

Next steps

1

Conduct another round of usability studies to validate whether the pain points users experienced have been effectively addressed.

2

Conduct more user research to determine any new areas of need.

Let's connect!

Thank you for your time reviewing my work on the Kay's Food Delivery App! If you'd like to see more or get in touch, my contact information is provided below.
